

Safety Clamp

for Glass Syringe

CH0860-001

Description:

This is a simple safety device for holding a gas syringe and supporting the body and the plunger to prevent the plunger from extending beyond a certain point. Gas syringes are fragile and expensive and this clamp not only prevents experiments from errors and increases user safety but also reduces breakages of gas syringes.

A strong stem protruding from the back of the clamp allows the clamp to be held by a retort stand. The spring clips and the frame are powder coated to prevent the scratching of the glass syringe during insertion and removal.

Material: Aluminium, powder coated to avoid corrosion.

Suitable for Gas Syringes with a volume of 100ml.

NOTE: Gas syringes are available from Technos Pty. Ltd.

Length: 300mm	Width: 140mm	Height: 40mm	Weight: 120g
